Summary

Software Engineer with **3+ years of experience** building **high-performance, scalable web applications**. Strong foundation in **data structures, algorithms, operating systems, and system design**, with hands-on experience delivering **low-latency, production-grade services**. Proven ability to work on **large codebases**, design **layered, componentized, and testable systems**, and ship features end-to-end with a strong focus on **quality, reliability, and performance**.

Experience

Software Engineer Dec 2024 – Present

Infosys

- Designed and implemented **secure, high-availability web services** in Node.js, focusing on **latency reduction and production reliability**, improving API response times by **15%**.
- Refactored critical request-handling and validation logic to improve **performance, debuggability, and maintainability** across shared service layers.
- Built a **componentized React analytics dashboard** emphasizing **state isolation, separation of concerns, and testability** while processing large vulnerability datasets.
- Collaborated with cross-functional and global teams to **define requirements, estimate work, and deliver features** using Azure DevOps CI/CD pipelines.
- **Tech:** Node.js, JavaScript (ES6+), React, MySQL, CosmosDB, Jest, CI/CD, Azure DevOps

Software Development Engineer – I Aug 2022 – Nov 2024

Honc (Ravini Technologies Pvt. Ltd.)

- Led the decomposition of a **large monolithic system into a distributed microservices architecture**, improving scalability by **80%** and enabling independent ownership and deployments.
- Designed and implemented **low-latency, high-throughput REST APIs** using Node.js, MongoDB, and Redis, achieving **99.9% uptime** under production workloads.
- Owned services end-to-end, from **design documentation and implementation** to deployment, monitoring, debugging, and production support.
- **Tech:** Node.js, JavaScript, MongoDB, Redis, AWS (EC2, Lambda, SQS), Docker, Microservices

Projects

Skin Cancer Detection Jan 2022 – Apr 2022

Machine Learning Project

- Developed a **CNN-based image classification system** achieving **87% accuracy**, focusing on model evaluation and probabilistic predictions.
- **Tech:** Python, TensorFlow, Keras

Technical Skills

Languages: JavaScript (ES6+), TypeScript, C++, Python
Web & Platform: HTML, CSS, React, Node.js, REST APIs
Systems & Architecture: Distributed Systems, Microservices, Event-driven Systems, System Design
Databases: MySQL, MongoDB, CosmosDB, Redis
Cloud & DevOps: AWS, Azure DevOps, Docker, CI/CD
CS Fundamentals: Data Structures & Algorithms, Operating Systems, OOP, Design Patterns

Education

- **M Tech, Artificial Intelligence and Machine Learning, BITS Pilani**
- **B Tech, Computer Science, HITAM**
